

ARACHNIDA (ARANEAE, RICINULEI) DESCRIBED BY NORMAN I. PLATNICK

LORENZO PRENDINI

Curator of Arachnida and Myriapoda

Division of Invertebrate Zoology, American Museum of Natural History, Central Park West at 79th Street, New York, New York 10024-5192, U.S.A.; e-mail: lorenzo@amnh.org

Abstract—A list of the 2,196 arachnid taxa (Araneae: 2181, Ricinulei: 13) described by the late Norman I. Platnick, is presented: two families (in synonymy); 159 genera (2 homonyms, 1 synonym), 2,035 species (6 synonyms).

Key words: Norman I. Platnick, arachnology, Araneae, Ricinulei, taxonomy, catalogue, nomenclature.

INTRODUCTION

Dr. Norman Ira Platnick, Curator Emeritus at the American Museum of Natural History, New York, passed away on April 8, 2020 in Philadelphia, PA, after a tragic accident. Norm, as he was known to friends and colleagues, was the second most prolific arachnologist in history, after Eugène Simon (Platnick and Raven, 2013). He described 158 new genera and 2,023 new species of spiders (Araneae) and a new genus and 12 new species of hooded tick-spiders (Ricinulei) over the course of his four-and-a-half-decade career, an average of 50 names and 46 species annually (Fig. 1, Table 1).

Norm laid the early framework of spider classification and the Tree of Life (Platnick and Gertsch, 1976; Platnick, 1975e, 1977d) and continued to play an active role in resolving spider phylogeny throughout his career (Forster and Platnick, 1984; Platnick and Goloboff, 1985; Forster et al., 1990; Platnick et al., 1991, 2012; Griswold et al., 1999, 2005; Wheeler et al., 2017). Along the way, Norm introduced new techniques, such as scanning electron microscopy, and character systems, such as spinneret morphology (Platnick et al., 1991, 2012), which forever changed the course of spider systematics. His prodigious monographic revisions and many smaller papers, often coauthored with former AMNH Scientific Assistants, Mohammad U. Shadab, Louis Sorkin, Nadine Dupérré and Lily Berniker (Table 2), who meticulously prepared dissections, illustrations, scanning electron micrographs, and so on, vastly increased knowledge of spider diversity on a global scale, and especially the poorly known fauna of the Southern Hemi-

sphere, to currently more than 48,978 species (World Spider Catalog, 2020). An authority on at least ten spider families, Norm named taxa in 49 of the 120 families, across all suborders and infraorders, adding many novelties, including *Neato* Platnick, 2002, *Oreo* Platnick, 2002, *Queenvic* Platnick, 2000, *Notnops* Platnick, 1994, *Nyetenops* Platnick and Lise, 2007, *Taintnops* Platnick, 1994, *Tisentnops* Platnick, 1994, *Paradysderina righty* Platnick and Dupérré, 2011, and *Paradysderina lefty* Platnick and Dupérré, 2011.

Norm's singular contribution to arachnology, his copious descriptions of arachnids notwithstanding, is undoubtedly the *World Spider Catalog*, which he created as a unified nomenclatural and taxonomic resource, and updated biannually over the course of two decades (Platnick, 2000–2020). Work on this project began in 1986, with the untimely death of Paolo M. Brignoli, formerly at the University of Aquila, Italy, when Norm accepted an invitation from the British Arachnological Society and Manchester University Press to prepare the first supplement to Brignoli's (1983) *Catalogue of the Araneae described between 1940 and 1981*. Over the next decade, three volumes of *Advances in Spider Taxonomy* (Platnick, 1989b, 1993b, 1998), collectively 2,500 pages, were published, covering the literature from 1981 through 1995 and including all synonyms, transfers, and re-descriptions from 1940 to 1980. These indispensable volumes became known as the 'Platnick Catalogs.' By the end of the 20th century it became obvious that the increasing quantity of taxonomic information could no longer be managed in printed volumes, however. An internet-based solution was required to handle the annual influx of over 300 taxonomic publications with

descriptions of ca. 900 new species. Norm began this task with the first online version of his *World Spider Catalog* in 2000 and continued through 2014, with two updated versions per year from 2002, a total of 28 updates (Platnick, 2000–2020). The catalog was hosted at the AMNH and served as HTML files per family. Upon Norm’s retirement in 2014, the Naturhistorisches Museum Bern, Switzerland, took over the *World Spider Catalog* and converted it to a relational database with a fully searchable bibliography of over 12,000 taxonomic citations, most with links to PDFs (World Spider Catalog, 2020). Unlike most other non-vertebrate taxa of comparable diversity, spiders now enjoy a completely up-to-date, online,

species-level taxonomic database since 1757 when the first 68 spider species were described by Carl Clerck.

MATERIAL AND METHODS

The list below comprises all 2,196 family-, genus- and species-group taxa of Arachnida described by Norman I. Platnick. Data were obtained from the *World Spider Catalog* Version 21.0 (2020) and the printed and online catalogs of Ricinulei by Harvey (2003, 2013). Families are listed alphabetically within orders, suborders and infraorders. Genus-group and species-group taxa are listed alphabetically within families (subfamilies and tribes are omitted). Type genera, type species, original names, synonyms, homonyms and associated notes are provided in square brackets after currently recognized names.
